Political Ecology and Climate Change Research: A Case Study of Unburnable Carbon

Tracey Osborne School of Geography and Development

April 27, 2016

Political ecology

Empirical research seeking to understand linkages in the condition and change of social/environmental systems, with explicit consideration of power relations (Robbins, 2005:12)

- (1) *Focuses on* the *causes rather than* the *symptoms* of environmental problems
- (2) Stresses that ecological systems are political, and our understandings of these systems are mediated by political and economic processes
- (3) Normative: Recognizes that "there are very likely better, less coercive, less exploitative, and more sustainable ways of doing things" (Robbins 2005: p.12).

Climate Alliance Mapping Project

 Carbon budget: we have used over 65% based on 2 degree C target

- Map layers
 - Fossil fuel reserves
 - Protected areas
 - Indigenous territory
 - Digital stories

Climate Alliance Mapping Project

Amazonian Basin

Priority Zones Indigenous territory

Conservation areas

Fossil Fuels Fossil fuel reserves
